

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Cancelled)
2. (Previously Presented) A system in accordance with claim 53, wherein the interface means is arranged to connect the customer computing device to the financial institution application in real-time to enable the payment to proceed in real time.
3. (Previously Presented) A system in accordance with claim 2, wherein the interface means is arranged to connect the customer computing device to the financial institution application during the on-line product transaction to enable the payment to occur during the product transaction.
4. (Cancelled)
5. (Previously Presented) A system in accordance with claim 53, wherein the interface means is arranged to generate confirmation to the merchant computing device that payment has occurred, the interface means connecting the financial institution computing device to the merchant computing device to enable confirmation.
6. (Previously Presented) A system in accordance with claim 5, wherein the interface means is arranged to provide a secure connection between the financial institution computing device and the merchant computing device for generation of confirmation that payment has occurred.

7. (Previously Presented) A system in accordance with claim 53, the interface means being arranged to obtain transaction details from the merchant network site and provide the transaction details to the financial institution application to facilitate payment.
8. (Original) A system in accordance with claim 7, wherein the transaction details include the payment amount.
9. (Original) A system in accordance with claim 7, wherein the transaction details include a merchant account identifier.
10. (Previously Presented) A system in accordance with claim 53, wherein the financial institution application is a known pre-existing financial institution application.
11. (Previously Presented) A system in accordance with claim 53, wherein the security device is provided by the customer entering the security device via the customer computing system.
12. (Previously Presented) A system in accordance with claim 53, wherein the security device is stored in a storage location accessible via the customer computing device, and the interface means is arranged to obtain the security device from the storage location via the customer computing device.
13. (Previously Presented) A system in accordance with claim 12, wherein the security device is stored in encrypted form, and wherein the interface means is arranged to decrypt the encrypted security means.
14. (Original) A system in accordance with claim 13, the system including storage means for storing decryption keys for decrypting encrypted security means.

15. (Previously Presented) A system in accordance with claim 53, further including a database arranged to store transaction details of transactions.
16. (Previously Presented) A system in accordance with claim 15, wherein the database is arranged to be accessible by the merchant computing device to enable a merchant to obtain details of transactions that they are associated with.
17. (Previously Presented) A system in accordance with claim 15, wherein the database is arranged to be accessible by customer computing devices to enable customers to obtain details of transactions that they are associated with.
18. (Previously Presented) A system in accordance with claim 53, wherein the interface means is an agent application.
19. (Cancelled)
20. (Previously Presented) A method in accordance with claim 60, comprising the further step of operating the financial institution computing device to make the payment.
21. (Original) A method in accordance with claim 20, wherein the step of making the payment occurs during the product transaction.
22. (Previously Presented) A method in accordance with claim 60, comprising the further step of electronically providing the merchant computing device with confirmation that a payment has been made.
23. (Previously Presented) A method in accordance with claim 22, wherein the step of providing the merchant computing device with confirmation that a payment has been made includes the step of establishing a secure connection between the financial institution computing device and the merchant computing device.

24. (Previously Presented) A method in accordance with claim 60, comprising the further step of automatically electronically obtaining transaction details from the merchant computing device and entering the transaction details to the financial institution computing device.
25. (Original) A method in accordance with claim 24, wherein the transaction details include a payment amount.
26. (Previously Presented) A method in accordance with claim 24, wherein the transaction details include a merchant transaction identifier.
27. (Previously Presented) A method in accordance with claim 60, wherein the step of enabling obtaining of the security device includes the step of enabling the customer to enter the security device via the customer computing system.
28. (Previously Presented) A method in accordance with claim 60, wherein the security device is stored in a storage location which is accessible via the customer computing device and the step of obtaining the security device includes the step of obtaining the security device from the storage location via the customer computing device.
29. (Previously Presented) A method in accordance with claim 28, wherein the security device is stored in encrypted form, and the method includes the further step of decrypting the security device.
30. (Original) A method in accordance with claim 29, wherein a decryption key is stored at a remote database, and the method includes the further step of obtaining the decryption key before decrypting the encrypted security means.

31. (Previously Presented) A method in accordance with claim 60, comprising the further step of storing transaction records of the payments in a database, the transaction records being available for access by merchants and/or customers.
32. (Previously Presented) A method in accordance with claim 60, comprising the step of utilising an agent application to implement the method steps.
33. (Cancelled)
34. (Previously Presented) A non-transitory computer readable storage medium providing a instructions for controlling a computing system to implement a system in accordance with claim 53.
35. (Previously Presented) A method of facilitating on-line payment for a transaction between a customer and a merchant, comprising the steps of providing a system in accordance with claim 53, and operating the system to facilitate payment for transactions.
36. (Cancelled)
37. (Previously Presented) A system in accordance with claim 63, wherein the system message is an email message.
38. (Cancelled)
39. (Cancelled)
40. (Cancelled)
41. (Previously Presented) A method in accordance with claim 64, wherein the system message is an email message.

42. (Cancelled)

43. (Cancelled)

44. (Cancelled)

45. (Previously Presented) A non-transitory computer readable storage medium providing instructions for controlling a computing system to implement a system in accordance with claim 63.

46. (Previously Presented) A system in accordance with claim 53, wherein the financial institution application is an Internet banking application.

47. (Cancelled)

48. (Previously Presented) A method in accordance with claim 58, wherein the financial institution application is an Internet banking application.

49. (Cancelled)

50. (Previously Presented) A system in accordance with claim 63, wherein the financial institution application is an Internet banking application.

51. (Cancelled)

52. (Previously Presented) A method in accordance with claim 64, wherein the financial institution application comprises an Internet banking application.

53. (Currently Amended) A system for facilitating payment for an on-line product transaction between a customer computing device and a merchant computing device, the system comprising:

a transaction facilitating computing device including a processor, memory and software arranged to generate a payment gateway accessible by the customer computing device at a merchant network site generated by the merchant computing device,

the payment gateway arranged to initiate a payment process for the customer computing device to control payment to a merchant account from a customer controlled account of a financial institution associated with the customer, via a financial institution computing device and providing an interface means arranged to control the customer computing device to connect the customer computing device to a financial institution application provided by the financial institution computing device, the customer computing device being arranged to provide a security device via the connection, to the financial institution application, in response the financial institution computing device being arranged to process payment from the customer account to the merchant account, without the security device being transmitted via the merchant network site and merchant computer[[]],

the system being arranged to enable provision of transaction details to the financial institution application, the provision of the transaction details only being enabled when the customer computing device is connected to the financial institution application.

54. (Previously Presented) A system in accordance with claim 7, wherein the interface means is arranged to automatically navigate the financial institution application to enter the transaction details.

55. (Previously Presented) A system in accordance with claim 54, wherein the interface means is arranged to automatically navigate the merchant network site and obtain data from the merchant network site to obtain the transaction details.
56. (Previously Presented) A system in accordance with claim 15, wherein the interface means is arranged to store the transaction details in the database.
57. (Previously Presented) A system in accordance with claim 18, wherein the transaction facilitating computing device is arranged to download the agent application on initiation of the payment process.
58. (Previously Presented) A system in accordance with claim 53, the system further comprising the financial institution application and financial institution computing device.
59. (Previously Presented) A system in accordance with claim 53, further comprising the customer computing device.
60. (Currently Amended) A method of facilitating payment for an on-line product transaction between a customer computing device and a merchant computing device, comprising the steps of:

during the on-line product transaction between the customer computing device and the merchant computing device, generating, by a transaction facilitating computing device including a processor, memory and software, a payment gateway,

accessing the payment gateway by the customer computing device at a merchant network site generated by the merchant computing device,

initiating, via the payment gateway a payment process for the customer computing device to control payment to a merchant account from a customer controlled

account of a financial institution associated with the customer, via a financial institution computing device,

controlling the customer computing device to connect the customer computing device to a financial institution application provided by the financial institution computing device,

providing a security device from the customer computing device via the connection, to the financial institution application, in response the financial institution computing device processing payment from the customer account to the merchant account, without the security device being transmitted via the merchant network site and merchant computing device[[]], and

providing transaction details to the financial institution application, the provision of the transaction details only occurring when the customer computing device is connected to the financial institution.

61. (Previously Presented) A method in accordance with claim 24, wherein the step of entering the transaction details to the financial institution application comprises the step of automatically navigating the financial institution application and electronically entering the transaction details.

62. (Previously Presented) A method in accordance with claim 32, comprising the further step of digitally downloading the agent application from the transaction facilitating computing device.

63. (Currently Amended) A system for facilitating on-line payment, comprising a transaction facilitating computing device including a processor, memory and software arranged to generate a payment gateway accessible by a customer computing device in response to the customer

computing device activating a system message, the payment gateway arranged to initiate a payment process for the customer computing device to control the on-line payment from a customer controlled account of a financial institution associated with the customer, via a financial institution computing device,

and an interface means arranged to control the customer computing device to connect the customer computing device to a financial institution application provided by the financial institution computing device, the customer computing device being arranged to provide a security device via the connection, to the financial institution application, in response the financial institution computing device being arranged to process the payment[[.]].

the system being arranged to enable provision of transaction details only being enabled when the customer computing device is connected to the financial institution application.

64. (Currently Amended) A method for facilitating on-line payment, comprising the steps of providing a system message to a customer computing device, generating a payment gateway via a transaction facilitating computing device including a processor, memory and software, the payment gateway being generated in response to activation of the system message at the customer computing device, the payment gateway being arranged to initiate a payment process for the customer computing device to control payment from a customer controlled account of a financial institution associated with the customer, via a financial institution computing device,

electronically connecting the customer computing device to a financial institution application provided by the financial institution computing device, providing a security device from the customer computing device via the connection, to the financial institution application, in response the financial institution computing device processing payment from the customer account[[.]], and

providing transaction details to the financial institution application, the provision of the transaction details only occurring when the customer computing device is connected to the financial institution application.
